

## Environmental Policy

The President shall establish the basic policy on environment regarding initiatives for environmental conservation, announce it both internally and externally, and continuously promote environmental conservation activities.

### Basic Policy

Through our business activities including product planning, development, manufacturing, and sales activities of engines, machinery for agriculture, forestry, gardening, and industrial use, next-generation energy sources, LSD, etc., we will actively commit to the conservation of the global environment, the prevention of pollution, and the continuous improvement of our environmental management system.

Furthermore, these initiatives must not hinder the economic interests of our customers, our company, and society as a whole.

- Following the Great East Japan Earthquake, public attitudes toward environmental conservation and energy supply have been changing rapidly.

While it is important to adapt to these changes, we must not react impulsively. It is essential to give careful and thorough consideration to all matters deeply, including our approach to product development.

- We assess the environmental impacts of our business activities, set and review environmental objectives and targets, and ensure compliance with applicable laws and regulations as well as other agreed requirements.

This environmental policy shall be made available to external parties upon request.

Kaaz Corporation  
President
